

NODE X

The Attabotics solution's new Node X improves on a proven, innovative design to further enhance performance. Featuring an ergonomic pick port, NodeX provides increased throughput, higher density, an improved operator experience, more safety features and increased efficiency.

Increased Throughput

Node X achieves significant improvements in productivity while maintaining the distinctive Attabotics footprint.

- » Ergonomic pick port design provides an average of 300 bin presentations per hour, with up to 400 bin presentations per hour once fully optimized.
- » Higher density with a single up-shaft design with an additional column of bin storage gained per node.

Improved Operator Experience

Node X provides operators with a more comfortable working environment that reduces strain and enhances accessibility.

- » Improved ergonomics featuring a 15-degree tilt that provides better visibility and access to bins.
- » Less need for repetitive bending and reaching motions decreases worker fatigue.
- » Stowable, foot platform to accommodate workers of any height.

Safety & Efficiency Upgrades

The innovative Node X design provides a safer working environment and increases operational efficiency.

- » Solution runtime consumes less energy to reduce Total Cost of Ownership (TCO).
- » Improved solution design reduces the need for maintenance by up to 20%.
- » Meets industry safety standards.
- » Decrease in footprint size from 6m² to 3.9m²
